Hi David

In response to your question:

The Aug 8 2015 ATSDR Emergency Response Consultation to the San Juan Basin County Health Department (regarding exposure to river water in the plume via skin contact or accidental ingestion) and the Aug 31 2015 ATSDR Letter Health Consultation to EPA R8/Area Command-Durango (regarding private drinking water well sampling results) are the only two ATSDR Region 8 documents that have been prepared in response to the Gold King Mine Blowout in Region 8.

ATSDR Region 8 has made a request to its Atlanta HQ to verify the status for ATSDR Region 6 and Region 9. We will forward the response as soon as we receive it.

Please let me know if you have any additional questions.

Thanks

Chris

Thanks for the ATSDR info.

Senate Indian Affairs staff followed up on the information and they want to confirm that the Aug. 31 letter and dissolved metal document are the only letters, analysis, and work being done by the CDC for the EPA related to the Gold King Mine Spill on August 5th? I did not forward any of the email chains.

They are also asking for additional information on how frequent the sites are tested and the intentions of the EPA on the length of testing. I think our website can show the frequency, but have we decided on future sampling plan yet?

They also ask if EPA has information on how the Navajo Nation tribal police escorts for samplers are being paid?

Thanks for your help, and sorry for the multiple requests.

Carolyn

Hi David:

Attached is a courtesy copy of the health consultation. I also dropped a hard copy off in the EOC for your files. Please let me know if you have any questions.

Regards,

Scott
